

Our vision...

Flourishing

Trade and innovation flourish

World leading

We are seen as world leading in animal health and welfare, public health and food safety

Welcoming

Skilled staff are accessible and welcomed

First choice

UK product research and development is incentivised

Success

Business is encouraged in the UK

With these we can deliver a thriving animal health sector beyond our exit from the EU

Thriving

in the post-Brexit landscape

The future of the animal health industry is set to change as the plans for exiting the European Union and our future co-operation with the EU are finalised.

NOAH's priority is for the sector to thrive in the post-Brexit landscape through a collaborative and co-operative regulatory system and relationship with the EU and international partners.

Through the NOAH Brexit Taskforce and bi-annual Brexit Barometers we've harnessed insight on what the animal health sector needs to do this.

Our findings suggest that securing input and support from Government into three key areas will help us to achieve our vision and secure a successful exit from the EU for our industry.

2. Regulatory challenges and solutions

We want to retain access to the EU veterinary medicines applications system, the European Medicines Agency (EMA), and the EU region. **Continued collaboration with the EU** will help us to tackle antibiotic resistance, combat disease outbreaks, and establish a system that allows the Maximum Residue Levels (MRLs) set for withdrawal periods made by international authorities to apply in the UK.

I think there will be a challenge in making it attractive for pharmaceutical companies and authorisation holders to get authorisations for new medicines in the UK.

Our goals...

We have to find another way of having that close alignment. We want that close alignment. The question is whether we will get it.

Brexit Barometer feedback

- ✓ To make the UK a place to do business
- ✓ To maintain regulatory efficiencies
- ✓ To ensure a seamless and efficient trading environment

Brexit Barometer feedback

1. Functioning supply chains

Functioning supply chains that span the UK-EU border are crucial to the production of veterinary medicines and their onward supply to tackle animal disease. **Border delays, complex processes and increased costs will cause a risk to medicines supply.**

Harness the opportunity of our status as an open, transparent and fair market with some of the highest standards of health and welfare and licensing in the world.

Brexit Barometer feedback

Our goals...

Ensure EU product licences are smoothly transferred to the UK to minimise any disruption for importing products.

Brexit Barometer feedback

- ✓ To avoid becoming a wave 2 country in terms of benefiting from new medicines
- ✓ To retain our status as an open, transparent and fair market
- ✓ To deliver the best standards of health, welfare and licensing worldwide

3. Research, development and innovation

Our sector is active in research, development and innovation. New medicines, alternatives to antibiotics, and new vaccines are all crucial to support the health and welfare of our farm animals and pets – **international collaboration and funding for scientists to work in the UK will help us thrive in this area.**

I would expect co-operation on scientific/public health issues such as AMR where this is clearly in the interest of both parties, and I understand that the UK's scientific expertise is respected and valued in Europe.

Our goals...

Regulatory divergence and non-EU status will move jobs (and talent) out of the UK, and medicines availability will be at risk.

Brexit Barometer feedback

- ✓ To safeguard funding for R&D and innovation
- ✓ To encourage new product development
- ✓ To be world leading in veterinary science research
